

AI Resume Analyzer – Technical Assignment

Objective:

Build a full-stack AI-powered Resume Analyzer application that evaluates resumes against job descriptions. The assignment is designed to assess AI integration, backend development, and frontend implementation skills.

Base Requirements (For All Candidates)

1. Upload Resume (PDF/DOCX)
2. Extract and parse resume content
3. Extract structured data (Name, Email, Skills, Experience, Education)
4. Compare resume with Job Description
5. Output match score and insights

Scope of Work

1. Multi-Resume Processing
 - Upload and process multiple resumes
2. Embedding-Based Matching
 - Use embeddings for similarity scoring
3. Section-wise Scoring
 - Skills, Experience, Education scoring
4. Resume Ranking System
 - Rank candidates based on score
5. Feedback Suggestion
 - Generate strengths and improvement suggestions
6. Backend Enhancements
 - Authentication (JWT), error handling, logging
7. Performance Optimization
 - Caching, efficient API handling
8. Basic RAG (Bonus)
 - Use vector DB for retrieval

Submission Guidelines

- Submit GitHub repository link
- Include setup instructions in README
- Provide sample inputs and outputs
- Mention assumptions and limitations

Test Timing

Maximum timing: 3hrs
